Our People

Robbie Baker, Electrician

What do you do at Centennial Coal and how long have been working for Centennial?

I have been working at Centennial Coal Charbon for the past seven years. I was first put on as an electrical apprentice. I am now an electrician working to maintain underground and surface mining equipment.

What do you most enjoy about being a member of the Centennial team?

I enjoy working on the wide range of electrical equipment at Charbon.

Favourite holiday destination and why?

My favourite holiday destination is Perth; I like to visit my family who live there.

What do you like to do in your spare time?

I like to spend my spare time working on electronics, metalwork and woodwork or going camping.

Airly community consultation sessions

The Airly project team is currently organising three community consultation sessions regarding the Airly Mine Extension Project which will be held in the coming months. The purpose of the consultation sessions is to:

- Continue to share information regarding the project
- Share the findings of the specialist consultants to the community (and stakeholders) prior to the public display of the Environmental Impact Statement
- Address issues of community concern
- Answer questions posed by the community.

The three sessions will address specific topics and will include presentations by the independent specialist consultants who prepared the studies for inclusion in the Environmental Impact Assessment.

Topics discussed during these sessions will include groundwater, biodiversity, air quality and cultural heritage.

The consultants will be available to present their findings, discuss issues and answer questions. The sessions will consist of formal presentations, question time and informal discussions afterwards.

The first session will be held on Sunday 13 October at Airly Mine commencing 10.00am and further information regarding session times will be made available shortly.

Rylstone Primary visits Charbon

Charbon Colliery recently welcomed 40 students from Rylstone Primary School to the Mine to learn more about the energy industry.

With the students ranging from kindergarten to second grade, Charbon's, Greg Munday, and Big Rim's, David Preece, had quite a day answering the students' numerous questions while touring Charbon's washery and pit top.

"The students asked some very interesting questions that ranged from how we transport the coal off site, to the rehabilitation methods we will use once the mine closes. They were also keen to learn more about Charbon's mining methods and our environmental activities," said Greg.

While the students were keen to learn more about the industry, they were captivated by the large trucks and machinery which were seen in action from the tour bus.

"The students loved seeing the mining machinery in action and it was a great way to show them what goes on at Charbon as many of them have parents, grandparents or relatives who work at Charbon," continued Greg.

"I would like to say a big thank you to Mr Greg Munday and the staff at Charbon for giving us the opportunity to see an industry in action. We will be following up this excursion with a trip to Wallerawang Power Station to see how coal is transformed into power. This will give the children a better understanding of how electricity is formed from start to finish," concluded Rylstone Primary School's, Mrs Balfourt.
